Dear Member:

Petit Jean Electric is in the process of installing a network-wide Automated Meter Information (AMI) system. We will be in your neighborhood soon to change out your meter and replace it with a new meter. The information system can perform many functions, one of those being obtaining meter readings.

The new meters are automated devices that will read your meter and send the reading through the power lines back to our office. With the AMI system, each month all the meters are read on the same day, the readings are transferred to the billing system automatically. This will save time, reduce costs and all but eliminate billing errors.

The new AMI system will also aid in restoration efforts after storm-related outages or other problems, saving time, which will in turn improve service. Troubleshooting and identifying power consumption patterns will be easier.

If you should have any questions, please feel free to give us a call.

Sincerely,

Member Services
